

Building Lot Erosion & Sediment Control Field Seminar

The statewide NPDES Construction Permit requires builders to provide temporary or permanent site stabilization and sediment control on almost every building site in Minnesota.

This interactive, fast-paced and hands on field course will provide a better understanding of: erosion and sediment control practices and products available; average costs of practices; and the vendors and contractors that provide these products and services.

Don't miss this rare opportunity to get answers about the NPDES program and options for meeting the requirements and see practices as they would be installed on a site.

Who Should Attend?

This field seminar is designed for erosion control designers, Minnesota builders, building inspectors, city and other government staff.

Agenda

Learn about these and more of the latest practices and see them installed on building lots:

- Hydromulch Types 5, 6, 8, 9
- Blankets Category 1-6
- Green Armor
- Several inlet protection practices
- Compost or shredded wood berm
- Compost & Wood chip logs
- Sediment logs/wattles
- Concrete washout options
- Constructions site entrance options
- Rolled erosion control products
- Aero Seed Aide
- and More
